

**Would a different
approach
to Hydrogen
make you
a winner ?**

Let's talk.

1968 Olympic Games, Mexico: Though his competitors all approached the high jump side on, one athlete decided to lead with his neck and back. Not only did this athlete win, his technique is now the standard which is practiced by high jumpers world-wide.

A refiner must also overcome operational and regulatory challenges in new ways. At Air Liquide we understand the importance of hydrogen to your operations and we have an extensive product and service offering to help you meet your objectives. Our hydrogen recovery membranes (MEDAL™), PSA and cryogenic systems will help you make the most of what you have. Innovative and cost effective hydrogen production technologies and distribution solutions can provide for any new needs.

Take advantage of our ideas to meet challenges differently.
